

# SalesPilot AI

Autonomous AI-Powered Account Research & Personalized Outreach  
Platform

---

*"Transform hours of manual prospect research into a fully autonomous  
30-second AI workflow that delivers actionable sales intelligence."*

■ One-Line Pitch

SalesPilot AI turns **hours of manual prospect research** into a fully autonomous **30-second AI workflow** — delivering actionable sales intelligence and hyper-personalized outreach at scale.

■ The Problem

Modern B2B sales reps spend **2–3 hours manually researching a single lead** before outreach — a repetitive, expensive, and unscalable process that kills productivity.

|                        |                                                                             |
|------------------------|-----------------------------------------------------------------------------|
| ■ Time-consuming       | Searching websites, LinkedIn, news, job boards manually for every prospect. |
| ■ Inconsistent quality | Research depth varies by rep skill and available time.                      |
| ■ Expensive at scale   | Senior SDR time wasted on data gathering instead of selling.                |
| ■ Poor personalization | Generic emails get ignored; relevance requires deep context.                |
| ■ No intent signals    | Missing buying signals means outreach is poorly timed.                      |

■ Our Solution

SalesPilot AI is an **autonomous sales intelligence agent**. A sales rep simply enters a company name — the AI does everything else automatically.

|   |                                 |
|---|---------------------------------|
| 1 | User enters company name        |
| 2 | AI Orchestrator starts workflow |

|   |                                    |
|---|------------------------------------|
| 3 | Parallel agent research            |
| 4 | Signal & intent analysis           |
| 5 | Pain point & competitor scan       |
| 6 | Personalized outreach drafted      |
| 7 | CRM auto-sync                      |
| 8 | Sales-ready lead profile delivered |

## ■ ■ Core Features

### ■ Autonomous Company Research

Automatically gathers company overview, industry, employee size, revenue estimates, tech stack, leadership info, and business model from websites, LinkedIn, Crunchbase, and news platforms.

### ■ Hiring Signal Detection

Analyzes open job positions, hiring velocity, and department expansion to identify companies actively growing — e.g., 8 new SDR hires = expanding sales ops = software buying intent.

### ■ Funding & Growth Intelligence

Detects recent funding rounds, acquisitions, market expansion, and product launches to identify budget availability and purchase probability.

### ■ Pain Point Detection Engine

Scans public reviews, Reddit threads, employee feedback, and social media to identify operational frustrations — enabling highly contextual outreach.

### ■ ■ Competitor Intelligence

Identifies current tools in use, vendor mentions, pricing frustrations, and migration signals — e.g., detecting Salesforce pricing complaints creates a displacement opportunity.

### ■ Buying Intent Scoring (0–100)

AI-powered weighted score from funding, hiring, tech adoption, competitor dissatisfaction, and expansion signals. Fully explainable with reasons for transparency.

### ✉ ■ AI-Personalized Outreach

Generates cold emails, LinkedIn messages, and follow-ups in enterprise, startup-friendly, consultative, and challenger-sales formats — backed by actual intelligence.

### ■ CRM Auto-Sync

Automatically pushes all insights into Salesforce, HubSpot, or internal CRM systems — zero manual data entry.

## ■ Buying Intent Score — Example

| Buying Intent Score | Acme Corp — Signal Breakdown                                                                                                                                                                                                                                                        |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <div>91</div>       | <ul style="list-style-type: none"><li>✓ Recently closed Series B funding</li><li>✓ Expanding sales team — 8 SDR hires</li><li>✓ Actively searching for automation tools</li><li>✓ Salesforce pricing dissatisfaction detected</li><li>✓ RevOps roles listed on job boards</li></ul> |
| /100                | <i>Explainable AI scoring — not a black box</i>                                                                                                                                                                                                                                     |

### ✉ ■ AI-Generated Outreach — Example

**Subject:** Congrats on Acme's Series B — quick question

Hi Sarah,

Congrats on Acme's recent Series B funding!

I noticed your team is actively hiring SDRs and scaling outbound operations — exciting growth. Many teams in that phase hit a wall with CRM efficiency and rep onboarding speed.

We recently helped a similar company cut sales workflow time by **40%** without adding software costs. Given your expansion, it might be worth a quick conversation.

Would you have 15 minutes next week?

Best,  
[Your Name]

## ■ Multi-Agent Architecture

SalesPilot AI uses **9 specialized autonomous agents** running in parallel, each focused on a specific intelligence domain. This improves modularity, reasoning quality, and scalability.

| Agent                  | Responsibility                      | Key Output                |
|------------------------|-------------------------------------|---------------------------|
| ■ Research Agent       | Collects company overview           | Profile + industry data   |
| ■ Hiring Agent         | Tracks recruitment signals          | Growth intent flags       |
| ■ News Agent           | Finds funding & press events        | Timeline of events        |
| ■ Tech Stack Agent     | Detects tools & platforms           | Current + potential tools |
| ■ Pain Point Agent     | Identifies operational frustrations | Contextual pain data      |
| ■■ Competitor Agent    | Analyzes rival solutions            | Displacement signals      |
| ■ Intent Scoring Agent | Calculates buying probability       | Score 0–100 + reasons     |
| ✉ ■ Email Agent        | Generates personalized outreach     | Multi-format drafts       |
| ■ CRM Agent            | Syncs data to CRM                   | Auto-populated record     |

## ■ Technology Stack

|                  |                                                                                  |
|------------------|----------------------------------------------------------------------------------|
| Frontend         | Next.js • Tailwind CSS • shadcn/ui                                               |
| Backend          | FastAPI • Python Asyncio • Celery / Redis • PostgreSQL                           |
| AI & Agents      | LangGraph • CrewAI • Claude API / OpenAI API • LangChain • Sentence Transformers |
| Web Intelligence | Bright Data (LinkedIn, Search, Reviews) • BeautifulSoup • Playwright • Selenium  |
| Data & Storage   | PostgreSQL • Redis Cache • Vector Database (optional)                            |

## ■ Expected Impact

|                            |                                    |                                  |                               |
|----------------------------|------------------------------------|----------------------------------|-------------------------------|
| 95%+                       | 40%+                               | 3x                               | 30s                           |
| <i>Research time saved</i> | <i>Outreach response rate lift</i> | <i>SDR productivity increase</i> | <i>Full research per lead</i> |

## ■ Innovation & Uniqueness

- Fully **autonomous end-to-end** workflow — no human steps in the research loop
- **Explainable buying intent** scoring — transparent reasoning, not a black box
- **Real-time web intelligence** — data is fresh at point of use, not stale database records
- Multi-agent architecture enables **parallel, specialized reasoning** at scale
- **Evidence-backed outreach** — emails are grounded in actual detected signals
- Identifies **hidden buying signals** (pain points, competitor frustration, hiring patterns)

## ⇒ ■ Recommendations & Improvements

Your core idea is **strong and well-scoped for a hackathon**. Here are actionable suggestions:

### Demo scope

Build a focused MVP: one working end-to-end flow (input → research → email). Don't try to build all 9 agents for a hackathon — fake/mock some data sources.

### Live demo tip

Pre-select 2–3 real companies as demo targets and cache research results so the demo runs in true '30 seconds' even with API rate limits.

### Bright Data cost

Bright Data scraping has real costs at scale. For the hackathon, use free alternatives like SerpAPI (free tier) or direct HTTP fetches from public pages.

### CRM integration

HubSpot has a free tier API — prioritize that over Salesforce for demo speed and to avoid licensing friction during judging.

### Differentiation angle

Lean hard into the 'explainability' of the intent score — judges love transparency. Show the reasoning, not just the number.

### Pitch framing

Lead with ROI: '2 hours → 30 seconds per lead = 48× productivity gain' is a powerful opening number for judges.

### Team naming

Consider renaming agents to be more product-friendly in the UI (e.g., 'Signal Scanner' vs 'Pain Point Agent') for a polished demo.

## ■ Future Scope

- Real-time prospect monitoring with change alerts
- AI-generated call preparation briefs before meetings
- Meeting intelligence summaries and next-step suggestions
- Predictive deal scoring integrated with CRM pipeline
- Multilingual outreach generation for global markets
- Autonomous follow-up sequencing with reply detection
- Browser extension for on-the-fly prospect research

*"SalesPilot AI transforms hours of manual prospect research into a fully autonomous 30-second AI workflow that delivers actionable sales intelligence and personalized outreach at scale."*
